

LISTING OF THE CLAIMS

Please cancel claims 11-20 from further consideration in the present application, and add new claim 21.

The listing of claims will replace all prior versions, and listings of claims in the application:

1. (Currently Amended) A spraying device adapted for connection with an associated fluid reservoir, the spraying device comprising:

 a dispensing assembly having a handle and an outlet for dispensing therefrom at least compressed air from an associated compressed source, and selectively dispensing an associated fluid from the associated fluid reservoir with the associated compressed air dependent on a position of the handle;

 a passage communicating with the outlet and for communicating with the associated fluid reservoir;

 a valve received in the passage between first and second valve seats, the valve providing for selective communication between the associated fluid reservoir and the outlet; and,

 a movable stem that is operatively associated with the handle and the valve such that in a first position, the valve engages the first valve seat to preclude fluid flow from the associated reservoir, in a second position is interposed between the first and second valve seats for supplying an associated fluid from the associated fluid reservoir to the valve seat, and in a third position the valve engages the second valve seat and precludes fluid flow from the associated reservoir.

2. (Original) The invention of claim 1 wherein the valve is a ball member received between the first and second valve seats.

3. (Original) The invention of claim 1 wherein the moveable stem is an elongated, hollow member.

4. (Original) The invention of claim 3 wherein the moveable stem is adapted for sliding movement relative to the dispensing head.

5. (Original) The invention of claim 3 wherein a first end of the stem is located adjacent the outlet.

6. (Original) The invention of claim 5 wherein a first end of the stem is located closest to the outlet in the second position.

7. (Currently Amended) The invention of claim 3 wherein a second end of the stem is operatively and selectively engageable with the valve.

8. (Original) The invention of claim 1 wherein the movable stem includes an internal passage which extends through the movable stem and terminates in a first opening at a first end and a second opening at a second end.

9. (Original) The invention of claim 1 wherein the handle extends outwardly from the dispensing head for selective movement relative thereto.

10. (Currently Amended) The invention of claim 1 wherein the outlet is adapted for communication with an associated compressor assembly.
